

How to use

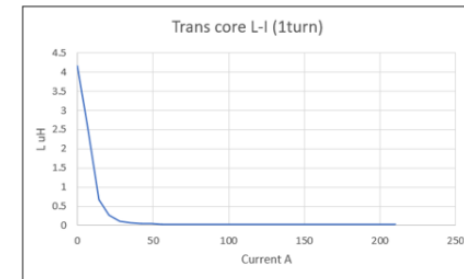

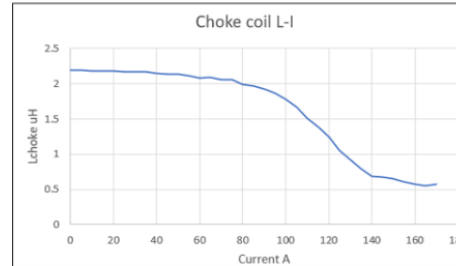

Src

-  PSFB_sim.py ← Main file: just run this file
-  interpolate.py
-  load_choke_LI.py
-  load_condition.py
-  load_trans_2nd_LI.py
-  psfb_dcdc.png

Place all of these files into a single folder. Please update the `csv\_path` in `psfb\_sim.py` to point to that folder's location.

Conditions

-  choke_LI.csv ← L-I of choke coil
-  drive_condition.csv ← Initial settings
-  trans_2nd_LI.csv ← Standardized trans core-self inductance (1turn coiled self inductance)

Results

 PSFB_sim_conclusion.csv	←	Settings, max and min current
 psfb_sim_result.csv	←	Ripple wave form, magnetized current

settings
